

# gh

## Pull Requests

`gh pr create` - Create a pull request on GitHub

`gh pr checkout [<number> | <url> | <branch>] --force` - Check out a pull request and reset the existing local branch to the latest state of the pull request

`gh pr merge [<number> | <url> | <branch>] --squash --delete-branch --admin` - Merge a pull request, squash the commits into one commit, delete the local and remote branch after merge, use administrator privileges

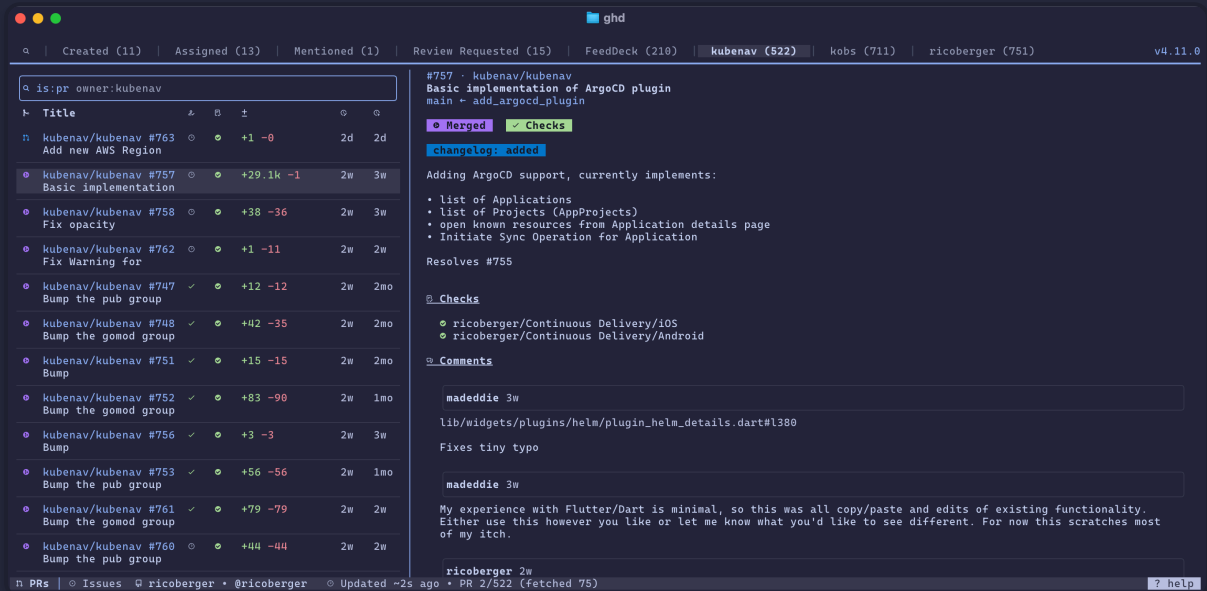

`gh pr edit [<number> | <url> | <branch>] --add-label "$(<gh label list --json name --jq ".[].name" | fzf)"` - Add label via fzf (list all labels from repository)

`gh pr edit [<number> | <url> | <branch>] --remove-label "$(<gh pr view [<number> | <url> | <branch>] --json labels --jq ".labels.[].name" | fzf)"` - Remove label via fzf (list all labels from pull request)

## gh-dash

### General

A GitHub (gh) CLI extension to display a dashboard with pull requests and issues by filters you care about.

- Website
- GitHub

## GitHub Actions
